

## **Multi-Function Entry System**

## **System Specs:**

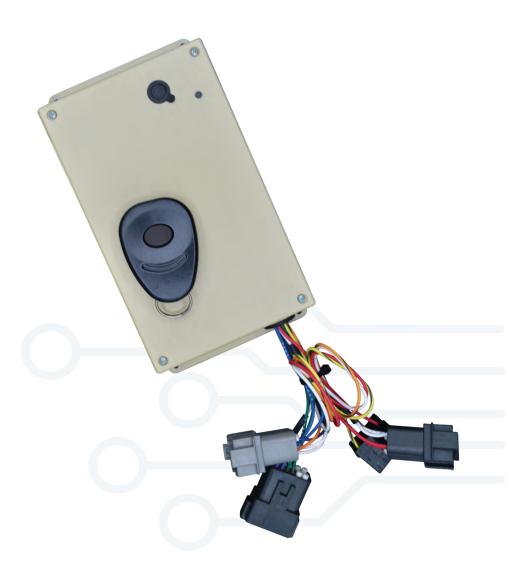

- Operating temp.: -20°C to 70°C
- Operating voltage: 6VDC to 18VDC
- Current draw: <100mA
- Protection:
  - Reverse polarity
  - Loss of ground
  - Backfeed
  - Under/over voltage

## **Features:**

- Fully customizable functionality
  - Unlock compartments
  - Start vehicle/equipment
  - Unlock any door
- Customizable fob
  - Size
  - Color
  - Number of buttons
  - Functionality of buttons
  - Environmental rating

## **MFES**

Multi-Function Entry System (MFES) is one of the many great keyless systems Riverside has developed over the years. The control module is the customer's playground. It can be fully customized to do whatever you need it to do from opening the bulkhead to starting the vehicle/equipment. The keyfob is also customizable both visually and functionally. The customer is not stuck with the fob that was designed without them in mind.

Customers have the option to choose size, shape, color, number of buttons and what each button does. If you want to have the fob do more things than there are buttons for, that's not a problem for MFES. The system can be customized so that each button can do different things based on number of presses and how long the button is held down.
